At Laerdal, we believe that simulation training for Healthcare Professionals is pivotal in our common goal to improve patient outcomes.

Simulation provides the opportunity to train staff without risk to patients. The ability to frequently practice and manage complex medical scenarios helps to prevent medical errors, while detailed feedback promotes discussion and re-enforces the learning process. Simulation will enable your staff to deliver quality patient care with integrity, consistency and confidence.

Laerdal has had five decades of experience creating medical educational products for use by Healthcare Professionals. It is a history and association of which we are proud.

SimMan 3G is the next generation of Laerdal simulation. SimMan 3G is a groundbreaking simulation solution. Completely wireless and self-contained, technically advanced and yet so easy to use; there is no patient simulator to rival it.
Imagine the training benefits of running a complete and continuous medical scenario from the moment of patient injury, at any location, through the challenges of patient transportation and concluding in a hospital; all realistically facilitated by a single patient simulator.

Completely wireless and self-contained, simulation training need no longer be compromised by location and equipment constraints.

Designed using the most cutting-edge technology, SimMan 3G opens up numerous simulation possibilities for variable locations and mobility. Easy to program, operate and transport; all aspects of medical training can now be challenged simultaneously and gradient levels of difficulty can be applied to each scenario to build student competence. SimMan 3G is compatible with SimView, which provides comprehensive debriefing support for quality feedback and effective learning.

SimMan 3G ...leading the way forward.
Making Simulation Easier

- **to use**
  SimMan 3G’s intuitive software interfaced with three flexible operating modes, enables novice and expert instructors to create effective simulations more simply and quickly than ever before.

- **to operate**
  Whether you are new to simulation training or just need a quick set up solution, the Automode feature is revolutionary in facilitating the most automatic way to operate SimMan 3G. It combines physiological models, pre-programmed patient cases and an innovative method for managing model based simulation. Instructors can now take advantage of pre-programmed pharmacological responses for over 149 drugs and devices, repeatedly run the most complex cases with ease and adapt difficulties to challenge the skills of every student.

- **to teach**
  The new improved Instructor Mode has been designed for instructors who like to combine their knowledge and skills with pre-programmed scenarios. Utilizing Instructor Mode On The Fly gives the more experienced simulation instructor the flexibility to digress at any time. The instructor can now initiate challenges responsively to the needs of each student at any given moment without compromising the flow of the simulation. Exciting features of the Instructor Mode include easy access to the most important vital signs and a new Graphical User Interface (GUI) that makes navigation through the scenario straightforward and effortless.
Helping you succeed

Laerdal is dedicated to helping you meet and exceed your educational goals. From simulators and scenarios to installation and training; our products and services are designed to help you achieve the optimal training environment with the most realistic outcome possible.

More than a Patient Simulator
SimMan 3G not only operates remotely but can also wirelessly integrate with your existing computer networks. It integrates fully with the complete ‘Circle of Learning’ intrinsic to all Laerdal products. Video debriefing, patient monitoring, pre-packaged patient cases and scenarios and SimView are just some of the accessories that make SimMan 3G a complete simulation solution.

Education to help maximise your return
SimMan 3G is available with a comprehensive range of products and services. These include an instructor-training programme from one of our product training specialists either at your location or at our fully equipped Laerdal Training Centre. Additional professional services include advanced programming courses, customised refresher training courses and scenario development services.

Protecting Your Investment
While our simulators are recognised for their quality and reliability, for that extra peace of mind, we also offer technical support services that make it easier for you to own, operate and maintain your programmes including preventative maintenance programmes, extended warranties and an optional Laerdal On-Site Service with our field service technician.

- to programme
SimMan 3G’s powerful scenario editing capability is built on the tried and tested SimMan software including the same flow diagrams, trends, handlers and events. Scenario writing and validation is simple to learn. Once a custom simulation is prepared, it behaves exactly as the instructor needs time after time so that every student can train in the same standardised way. The software can even include images, sounds and multi-media graphics to enhance the learning of students.
Since the launch of Resusci Anne in 1960, Laerdal’s lifelike manikins and patient simulators have helped to train an estimated 300 million medical professionals and lay responders around the world to save lives and improve patient outcomes.

Today, Laerdal is internationally renowned for products that not only go beyond user expectations but work well beyond their normal expected life.

SimMan 3G is a testimony to this tradition. It has been designed to withstand use in the harshest of environments to create realistic scenarios.

### SimMan 3G

**Built to last**

**SimMan 3G**

**Improved learning with quality debriefing**

The ability to debrief is a critical component of any simulation based Education program. Debriefing helps instructors to review the learners’ performance and assess whether the learning objectives have been met.

As with all of Laerdal’s simulators, SimMan 3G can be fully integrated with SimView™, Laerdal’s video capture and debriefing solution. SimView captures details of student performance within simulations, and compiles the audio, video, patient monitor information and event log data to form a comprehensive debrief file.

SimView can also be integrated to your network to enable debriefing to take place wherever you choose and also allows simulations to be viewed throughout your facility.

Contact your Laerdal representative to learn more about SimView and how to best configure the SimView solution in your facility.
Drug & Event Recognition
The advanced Drug Recognition System allows students to administer drugs simultaneously. It registers the amount, speed and type of drug automatically and applies the appropriate physiological responses, saving the instructor time and improving the overall intelligent debrief.

Wireless Monitor
Part of the complete wireless simulation solution, the wireless monitor enables you to observe the patient simulator’s vital signs while moving around freely during training.

Secretions
The eye secretions feature has multiple scenario applications such as responsive reactions to chemical, biological, radiological and nuclear agents.

Convulsions
Degrees of seizures and convulsions can be created from minor effect through to a full convolution through the Instructor Mode.

Quality CPR Feedback
Laerdal’s Q-CPR technology measures the quality of CPR providing real-time feedback on compression rate, depth, release, and hands-off time as well as generating palpable pulses, blood pressure wave forms and ECG artefacts.

Bleeding and Wounds
Wound models can be connected to an internal blood reservoir which will bleed both from arterial and venous vessels. Connected to the simulator’s physiological modeling, SimMan 3G will react appropriately according to treatment.

Eye Signs
Include pupillary responses to light, blinks at slow, normal and fast rates, winks and open, partially open and closed reactions.

Vascular Access
In addition to the standard vascular access in the right arm, the intrasosseous access via the ilium and sternum allows for procedure accuracy.

Convulsions

Drug & Event Recognition

Quality CPR Feedback

Bleeding and Wounds

Eye Signs

Vascular Access

SimMan 3G
....leading the way forward.
Airway Complications:
- Trismus
- Laryngospasm
- Pharyngeal swelling
- Tongue edema
- Can’t intubate/Can’t ventilate
- Can’t intubate/Can ventilate
- Connectivity with third party
- Stomach distention
- Decreased cervical range of motion

Airway Skills/Features:
- 4 settings
- Variable airway resistance
- Variable lung compliance
- Multiple airway placement
- Rugged and reliable for use in multiple environments

Circulation Features:
- BP measured manually by auscultation of Korotkoff sounds
- Carotid, femoral, brachial, radial, dorsalis pedis, popliteal and posterior tibial pulses synchronized with ECG
- Pulse strength variable with BP
- Pulse Palpation is detected & logged

Vascular Access:
- IV access (right arm)
- Intravenous access (ibiza)
- Automatic Drug Recognition System

CPR:
- Compliant with 2010 Guidelines
- CPR compressions generate palpable pulses, blood pressure wave form, and ECG artefacts
- Realistic compression depth and resistance
- Detection of depth, release and frequency of compressions
- Real time feedback on quality of CPR

Other Features:
- Seizure/convulsion
- Bleeding
- Simulation of bleeding at multiple sites
- Arterial and venous
- Vital signs automatically respond to blood loss & therapy
- Works with various wound modules & moulage kits
- Urine output (variable)
- Foley catheterization
- Secretions
- Eyes, Ears, Nose, Mouth
- Blood, Mucous, CSF, etc.
- Diaphoresis
- Bowel Sounds – four quadrants
- Patient Voice
- Pre-recorded sounds
- Custom sounds
- Instructor can simulate patient’s voice wirelessly
- Instructor Communication
- Multiple instructors communicate using integrated voice over IP

Pharmacology:
- Automatic Drug Recognition System identifies drug & dose
- Extensive drug formulary
- Automatic or programmable physiological responses

System Features:
- Wireless tablet PC controls simulator remotely
- Control multiple manikins from one interface
- Control simulations from anywhere on your network
- Multiple interfaces can control/observe a single simulation

Certifications:
- UL, CE, FCC, CSA, HMR

SimMan 3G includes:
- SimMan 3G Manikin
- SimMan 3G Software & License
- Operator’s Tablet PC
- Simulated Patient Monitor and Software
- Simulated Patient Cables
- Webcam
- Drug Recognition Kit
- Soft Sided Transportation Cases
- Specially Designed Clothing
- 1 Patient Case for AutoMode
- 1 Year Manufacturer’s Warranty

Scenarios and scenario packages are available on SimStore.
